

Locking StopLock

The Stoplock for standard sliding glass doors is primarily designed to keep a burglar from tampering with the security bar with slim jim or other thin wire through the space between the closed doors on older sliding glass doors.

The Stoplock for Pet Doors is designed so that a burglar can't reach in through the pet door opening with a stick and push up the security bar and unlock it.

knob  side view of stop lock

- stop lock fits on top of bar
- slides over box channel to lock.
- slides out of way when not in use.
